PROFESSIONAL SUMMARY

Senior Frontend Engineer with **5+ years** architecting and scaling **B2B and B2C SaaS products** for **high-growth startups** and international clients. Specializes in frontend architecture, reusable component systems, and performance optimization across **React.js**, **Next.js**, and **TypeScript**. Owns architecture decisions, sprint planning, and end-to-end delivery across concurrent product workstreams, with a track record of measurable impact on code quality and application performance. Currently extending this expertise into **AI engineering** applying **MCP servers**, **LLM-powered automation**, and **agentic tooling** to internal developer workflows, and integrating **LLMs** directly into consumer-facing SaaS products.

KEY ACHIEVEMENTS

- Reduced production UI bugs by **45%** over two quarters (measured via **Sentry**) by introducing systematic component audits, **Storybook**-driven documentation, and **Jest + React Testing Library** regression coverage.
- Improved **Core Web Vitals (LCP)** by **40%** across three web applications through route-level code splitting, **React.lazy**, and asset optimization.
- Architected the Samsung TV frontend for **PHYND**, a **\$10M seed-funded** cloud gaming platform now in beta on **Samsung Gaming Hub (US)** — built **D-pad spatial navigation**, module structure, and component systems for a console-free experience.
- Built and maintained a reusable **React + TypeScript** component library in **Storybook**, adopted across **4 product workstreams**, cutting feature development time by **30%** and eliminating cross-team duplication.
- Contributed frontend engineering to **LNQ Marketplace**, a **Forbes-featured** marketplace backed by **Jay-Z's Marcy Ventures**.

PROFESSIONAL EXPERIENCE

Founder & Full Stack Engineer

PrepSarkar AI · Remote

Feb 2026 – Present

PrepSarkar AI — Full Stack SaaS Platform

- Independently architected and shipped a live full stack SaaS platform, owning the entire product from **PostgreSQL** schema and **NestJS** REST API (6 modules, JWT auth, cron jobs, payment integration) to **Next.js** frontend (App Router, SSR/SSG/ISR/CSR, auth middleware), deployed on **Railway** and **Vercel**.

Lead Engineer — Frontend

Rapid Innovation LLP · Remote

Apr 2023 – Jan 2026

XStrela / PHYND — Cloud Gaming Platform (Samsung Gaming Hub)

- Owned end-to-end frontend development of the XStrela user-facing web app, translating **Figma** designs into production-ready game listings, user profiles, and gameplay integration, contributing to a platform that raised a **\$10M seed round** and pivoted into **PHYND on Samsung Gaming Hub**
- Built the **admin panel** with RBAC settings and platform configuration, and an **analytics dashboard** with dynamic reporting, configurable columns, date range filtering, and CSV/PDF export
- Refactored the XStrela codebase for scalability, decomposing monolithic components into modular systems and establishing **architecture patterns** adopted team-wide
- Designed the entire **Samsung TV frontend architecture** from scratch, including module structure, component system, D-pad spatial navigation, and state management for a console-free cloud gaming experience
- Implemented **D-pad spatial navigation**, handling complex edge cases including non-standard focus traps, dynamic content regions, and multi-directional traversal, and mentored junior engineers on scalable React practices

ArcadiaX — AI Meeting Intelligence Platform

- Implemented create-and-manage meetings flow end-to-end, translating **Figma** designs into meeting templates, configurable workflows, and dynamic form systems for an **AI-powered** meeting platform
- Built a **chat-with-transcription** feature — real-time **LLM-powered** conversation against meeting transcripts with a streaming-aware chat UI
- Led **frontend performance improvements** via code splitting, lazy loading, and component-level optimisation, and architected reusable **React + TypeScript** component systems that reduced duplication and established architecture patterns across multiple workstreams

Software Engineer — Frontend

Jun 2021 – Apr 2023

Rapid Innovation LLP · Remote

LNQ Marketplace — Blockchain Fashion Platform (Forbes-featured, Marcy Ventures)

- Implemented the full **checkout flow** using **GraphQL**, product selection, payment steps, and on-chain purchase confirmation for a **Web3** fashion marketplace backed by Jay-Z's **Marcy Ventures**
- Built a **real-time chat system** with **WebSocket**-driven message delivery across desktop and mobile

PowerCity Amplifier — DeFi Frontend

- Resolved **wallet connection issues** across multiple **Web3 providers** and fixed **number precision bugs** in financial calculations, critical for accurate lending and yield displays
- Improved **frontend performance** through component-level optimisation, reducing re-renders across the Amplifier lending interface
- Introduced **Redux Toolkit** state management patterns adopted as team-wide standard across multiple codebases

Frontend Developer (Contract)

Apr 2021 – May 2021

Alnitek Innovative Solutions · Remote

- Built a **drag-and-drop chatbot workflow builder** in React.js and Material UI, delivering a no-code interaction flow prototype within a one-month engagement.

TECHNICAL SKILLS

Frontend	React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, HTML Canvas API, Redux Toolkit, TanStack Query, Zustand, Tailwind CSS, shadcn/ui, Styled Components
Architecture	Frontend Architecture, Design Systems, Figma (design-to-code), Storybook, Component Systems, RBAC, Secure Coding (XSS prevention, input sanitisation, secure token storage, HTTPS enforcement), TV App Development (Samsung Tizen)
Backend	Node.js, NestJS, REST APIs, GraphQL, JWT Auth, TypeORM, Cron Jobs, Payment Integration
Databases	PostgreSQL, MongoDB, Redis
Performance	Core Web Vitals (LCP, CLS, INP), Lighthouse, React Scan, Code Splitting, Lazy Loading, Bundle Optimisation, Webpack, Vite, Memoisation
Testing	Jest, React Testing Library, Vitest, Playwright, Unit Testing, Integration Testing, Cross-browser Debugging
AI Engineering	MCP Servers, LLM Integration, Agentic Workflows, GitHub Copilot, Cursor AI, Claude, AI-assisted Development
Tooling	Git, GitHub, CI/CD (GitHub Actions), Vercel, Railway, Netlify, Docker (basic), Jira, Agile/Scrum
Web3	Wallet Integration, Blockchain-connected UIs, DeFi Frontend, ethers.js (basic)

EDUCATION

Bachelor of Engineering (B.E.), Computer Engineering

2017 – 2020

Sinhgad Academy of Engineering, Pune · GPA: 8.3 / 10

Diploma, Computer Engineering

2015 – 2017

Shri Sai Polytechnic, Chandrapur · 80.88%
